

# Coin Mech O/S calculation timing

- This only applies to machines with a coin mech that reports inventory
- VMS users reported that sometimes the Coin Mech O/S reported incorrectly
  - We determined that Gimme VMS correctly calculates  $\text{Coin Mech O/S} = \text{Coin Mech DEX} - \text{Expected Coin}$
  - However, the timing of this calculation with users getting DEX provided incorrect data
- We updated the logic to get DEX files first, then coin mech inventory data
