## Planogram Builder view:

- This view displays all the products placed in the market
  - Includes products with zero capacity, restock, and inventory so they can be scanned and purchased in these two instances:
    - A user swaps a product and/or changes the capacity and restock to zero
    - If the inventory of a product is incorrectly changed to zero

When a driver takes inventory of a market, the products in the **Planogram Builder view** will appear during the spot check. To create a more efficient way of inventorying a market:

- 1. Import POG from an existing market into the new market
- 2. Adjust the restock/capacity of products
- 3. Pick products and place them in the market
- 4. Complete a full inventory
- 5. Remove any products with a zero inventory on the Inventory Builder screen

\*Note: products visible in the POG view in VMS are visible to Gimme Field users. Products with a zero par, cap, restock, and zero inventory will not display in the POG view in VMS or Field for a micro market visit.
