

# Nesting of account, location, point of sale, equipment

## Accounts > Location > POS > Equipment

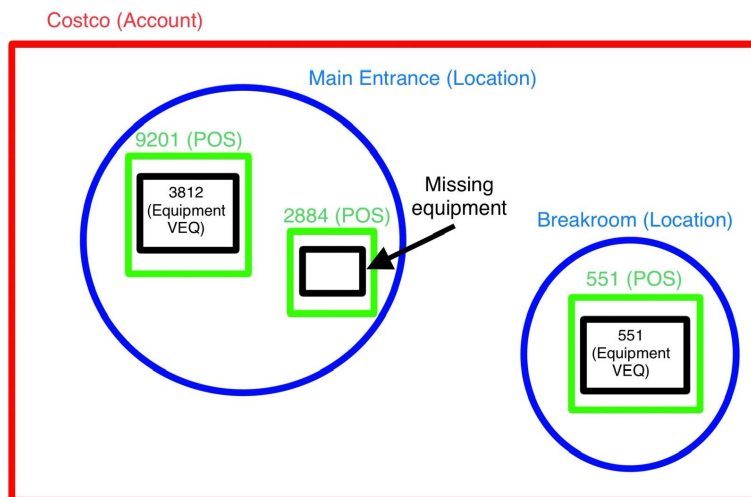

Creating a new account and all of its contents must follow the above order of operations.

- Users must first **create an Account** before a **Location**
  - **Create a POS** within the Location, that is within an Account

Equipment can be created at any time and added to a warehouse. Once the POS is created, it can be placed at the POS. (Optional for non-vending/food POS).

Sales (cashless, bills, and coins) are associated with the POS, not equipment. This means that you do not need to allocate sales after **swapping equipment**.

For example: At the Costco Account, POS 2884 is newly created and does not have a vending machine assigned to it. The drink machine, 551, placed in the POS 551 will be moved to the main entrance. The sales generated from the drink machine 551 stays with POS 551. Any new sales at POS 2884 will be associated with POS 2884.

Costco (Account)
